

Material type: Yttria (Y<sub>2</sub>O<sub>3</sub>)

## **DEGUSSIT Y23**

| Properties                      |              | Unit                 | Specific value                |
|---------------------------------|--------------|----------------------|-------------------------------|
| Main component                  |              | -                    | Y <sub>2</sub> O <sub>3</sub> |
| Purity                          |              | wt-%                 | > 99,7                        |
| Density                         |              | g / cm <sup>3</sup>  | ≥ 4.90                        |
| Open Porosity                   |              | vol%                 | 0                             |
| Average Size of Crystallites    |              | μm                   | 20 - 30                       |
| Bending Strength $\sigma_{m}$   | DIN EN 843-1 | MPa                  | 180                           |
| Thermal Shock Resistance        |              | -                    | -/+                           |
| Young's Modulus                 | static       | GPa                  | 160                           |
| Maximum Application Temperature |              | °C                   | 2200                          |
| Hardness                        | HV1          | -                    | 680                           |
| Thermal Expansion Coefficient   | 20 - 500 °C  | 10 <sup>-6</sup> / K | 7.16                          |
|                                 | 20 - 1000 °C | 10 <sup>-6</sup> / K | 7.91                          |
| Typical Colour                  |              | -                    | white - grey                  |

The data indicated on this table are in line with the introductory German Industrial Standard DIN 60672-2 and relate to test specimens from which they were obtained. They are not unconditionally applicable to other forms of the same material. The data must be regarded as indicative only. All data refer to a temperature of 20 °C, unless otherwise specified.
